

Incident Response

UBNetDef, Fall 2022
Week 6

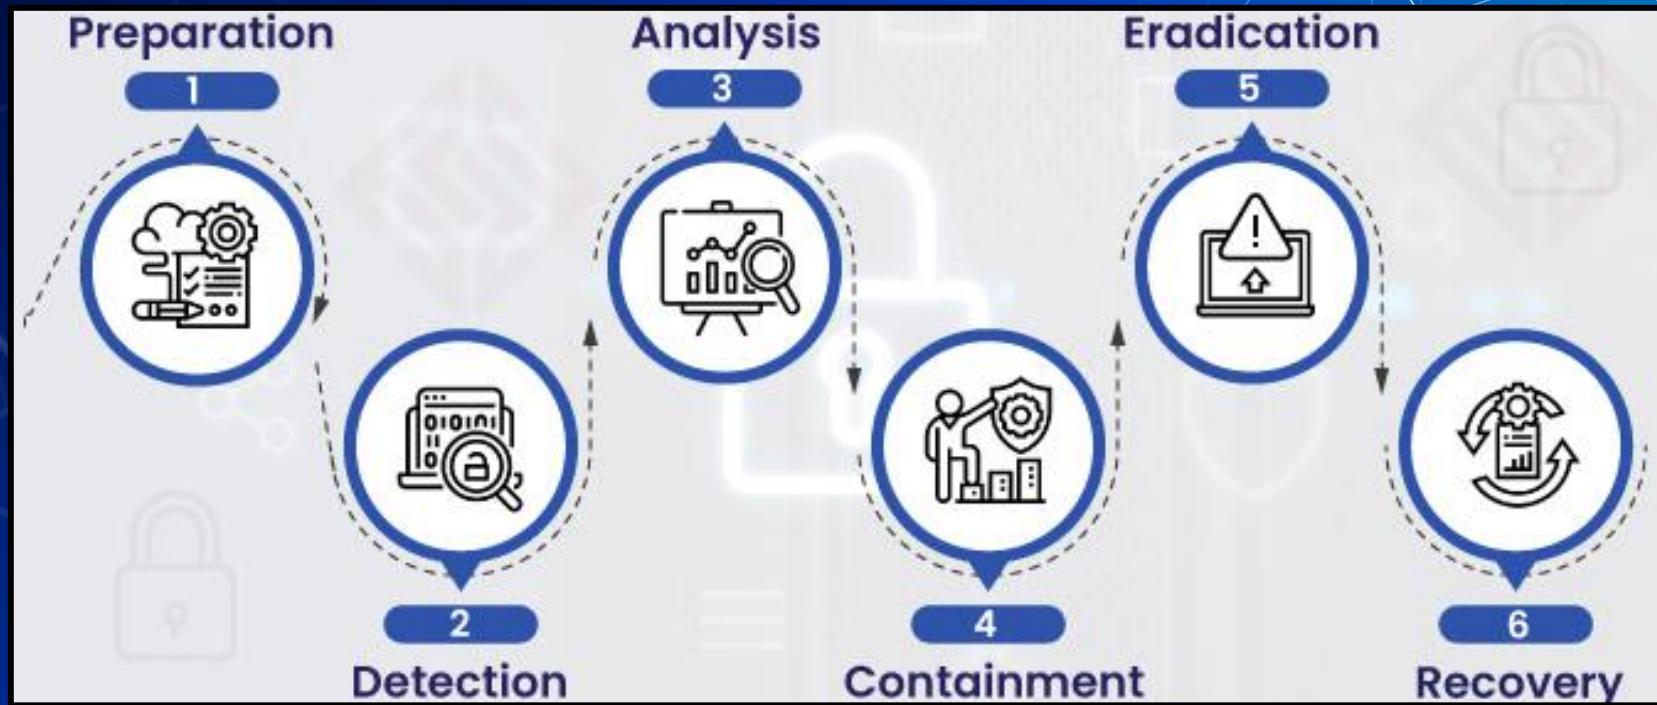

Presenter:
Anthony Magrene

Agenda – Week 6

- Incident Response (IR) High Level
- Windows Concepts
- Network Forensics
- PowerShell for IR
- Hands-on Activity 1-2
- Windows Management Instrumentation (WMI) & Services
- Hands-on Activity 3
- Persistence
- Hands-on Activity 4

Incident Response

Windows Concepts

Notable File Types

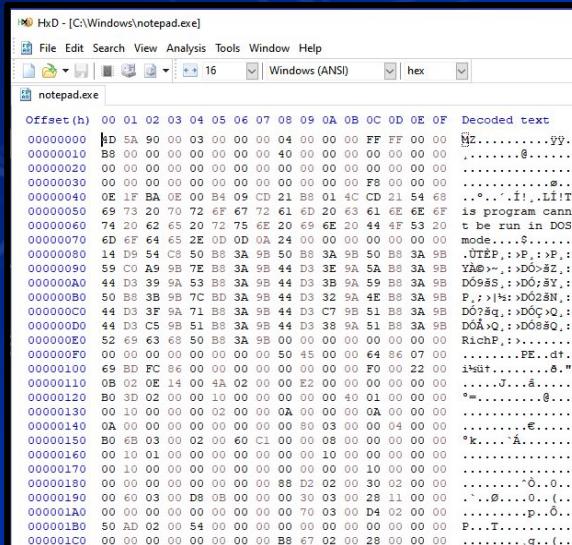

Dynamic Link Library (.dll)

- Windows implementation of shared libraries
- Prevents redundant storage commonly used code

PowerShell Script (.ps1)

- PowerShell Integrated Scripting Environment (ISE)
- Extensive .NET integration

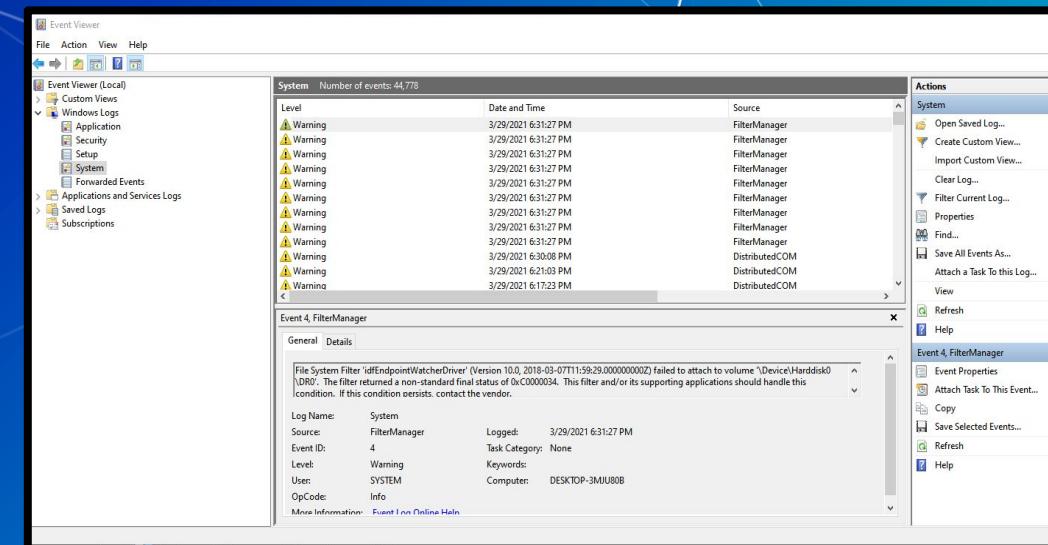

The screenshot shows the Windows PowerShell Integrated Scripting Environment (ISE) window titled "RSA.ps1". The code in the editor is a PowerShell script for generating RSA keys. It starts by defining variables \$p and \$q as 101 and 103 respectively, calculates their product \$N, and finds their greatest common divisor \$GCD. It then initializes arrays \$factors, \$rules, and \$i. A loop continues until \$stop is set to \$true. Inside this loop, another loop iterates from 1 to \$N-1, adding each value to \$rules and incrementing \$i. After this inner loop, the script checks if \$i equals the square root of \$N. If so, it adds \$i to both \$factors and \$NFactors. Finally, it increments \$i and repeats the process until \$i reaches the square root of \$N.

```
$stop=$false
$p=[bigint]$p-101
$q=[bigint]$q-103
$N=$p*$q
$fin=(($p-1)*($q-1))
$sqrtN=[math]::sqrt($N)
$sqrtfin=[math]::sqrt($fin)
write-host $fin
$nfactors = @()
$finfactors = @()
$rules = @()
$i=2
#build list of 1 < e < fi(N) List is $rules
while($stop -eq $false){
    while($i -lt $fin){
        $rules+=$i
        $i++
    }
    $stop=$true
}
#factors of N and factors of fi(N)
$i=1
$stop=$false
while($stop -eq $false){
    while($i -le $sqrtN){
        if($N % $i) -eq 0{
            $nfactors += $i
            $NFactors += $N/$i
        }
        $i++
    }
    $i=1
    while($i -le $sqrtfin){
        if($fin % $i) -eq 0{
            $finfactors += $i
        }
        $i++
    }
}
```

Event Log (.evtx)

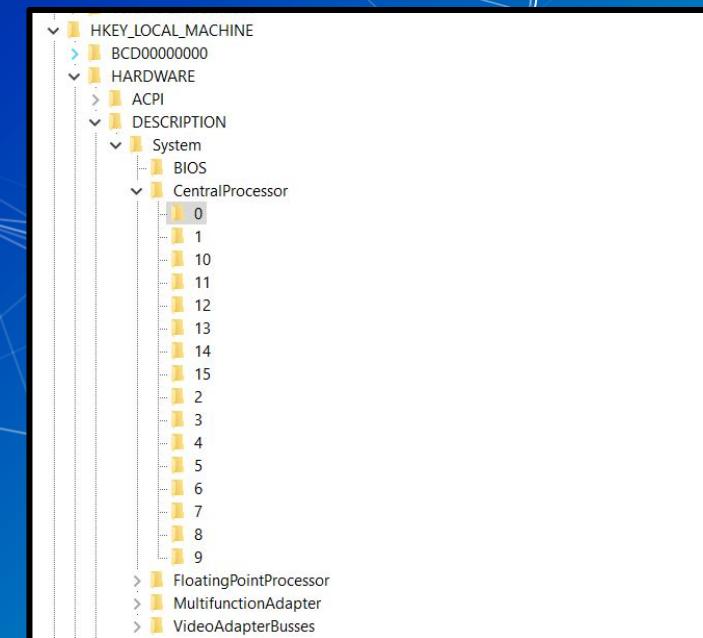

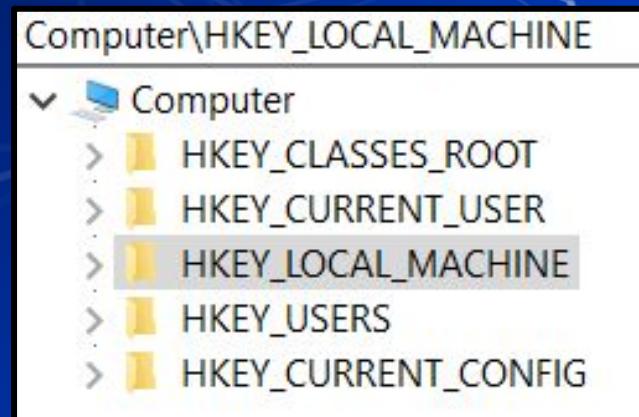

- Stores Windows Logs
- Located C:\Windows\System32\winevt\Logs\
- Event viewer used to view logs

The Registry

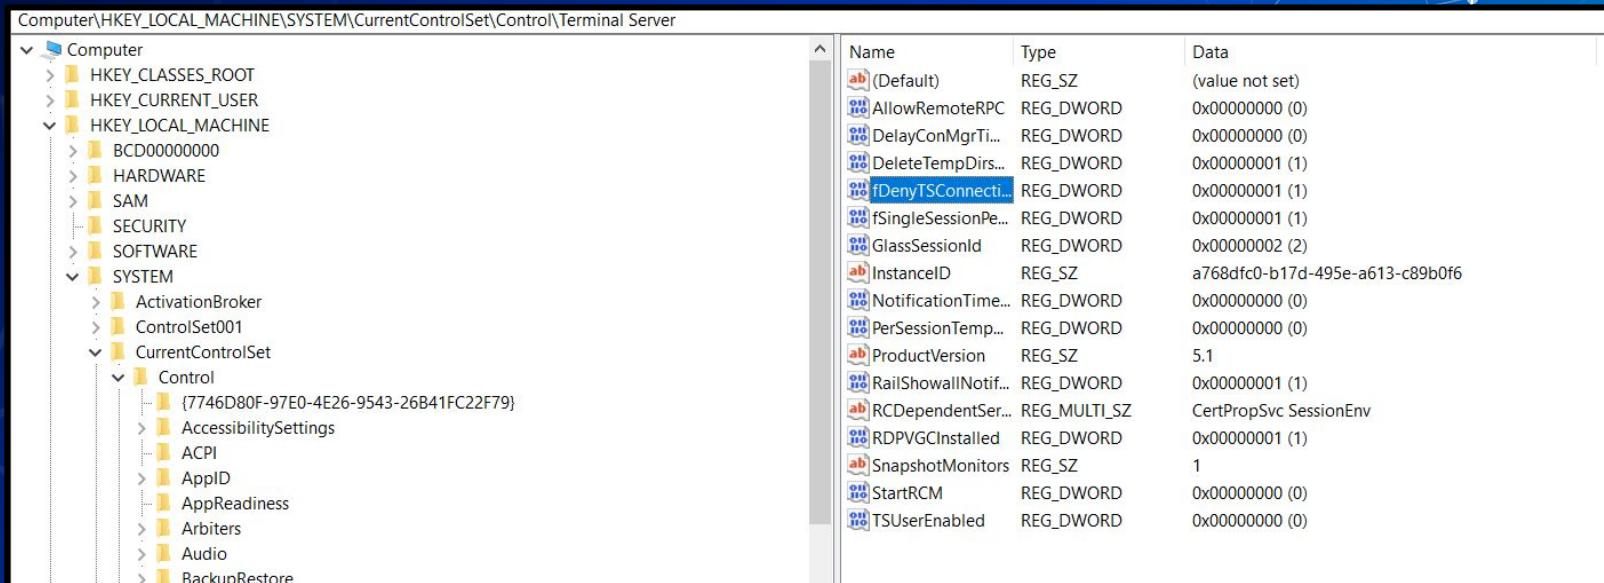

Registry

- Hierarchical database
 - Stores low-level settings

Registry cont.

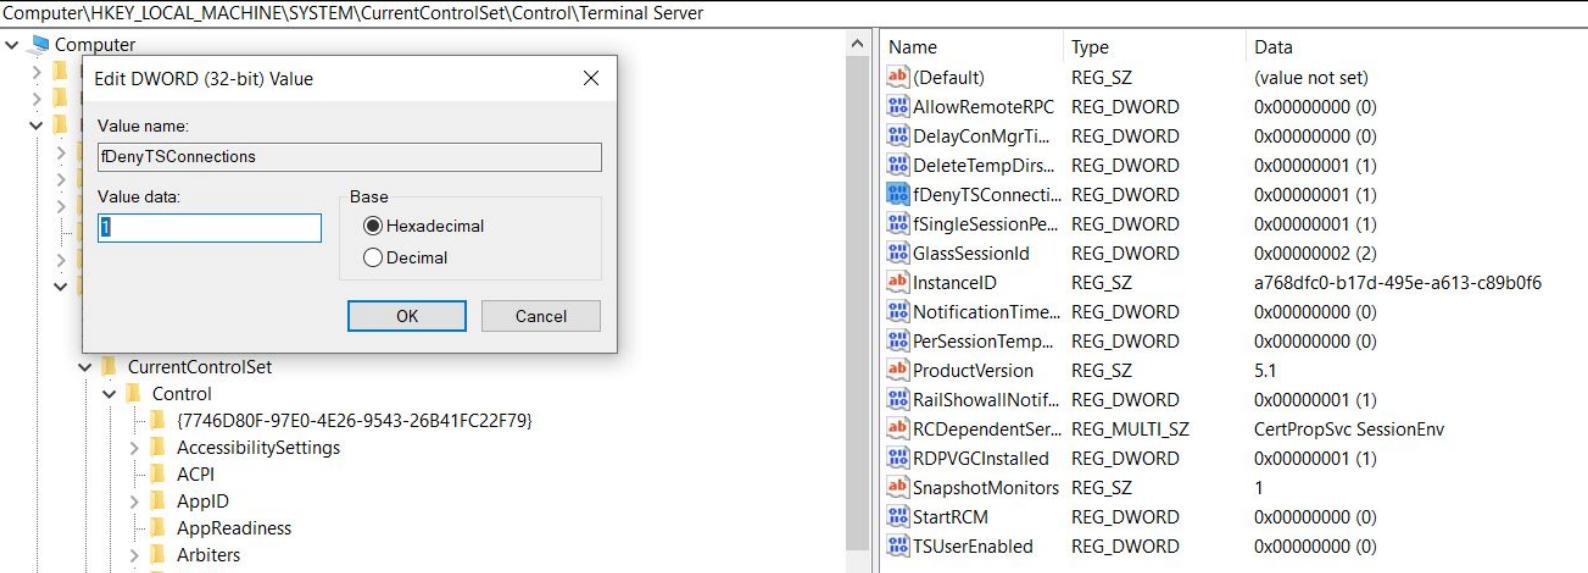

Computer\HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Control\Terminal Server

TSUserEnabled	REG_DWORD	0x00000000 (0)

Registry cont.

Computer\HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Control\Terminal Server

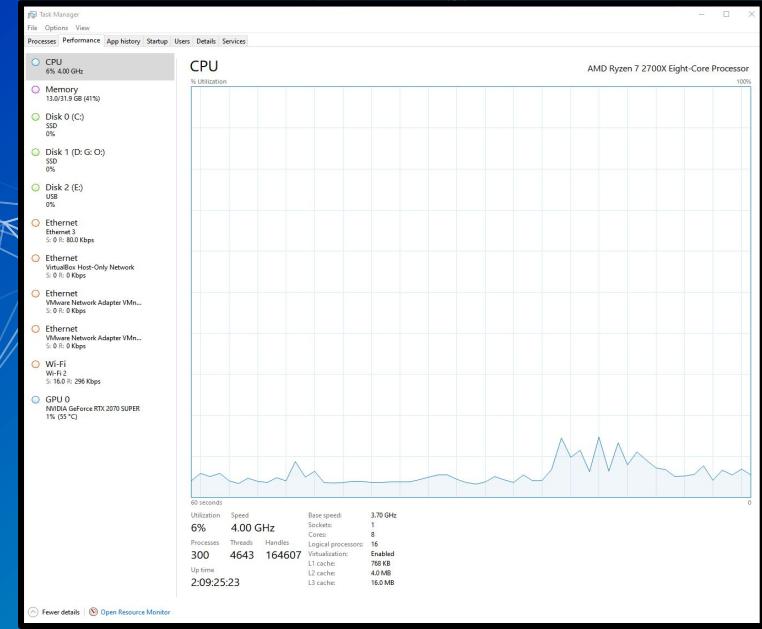

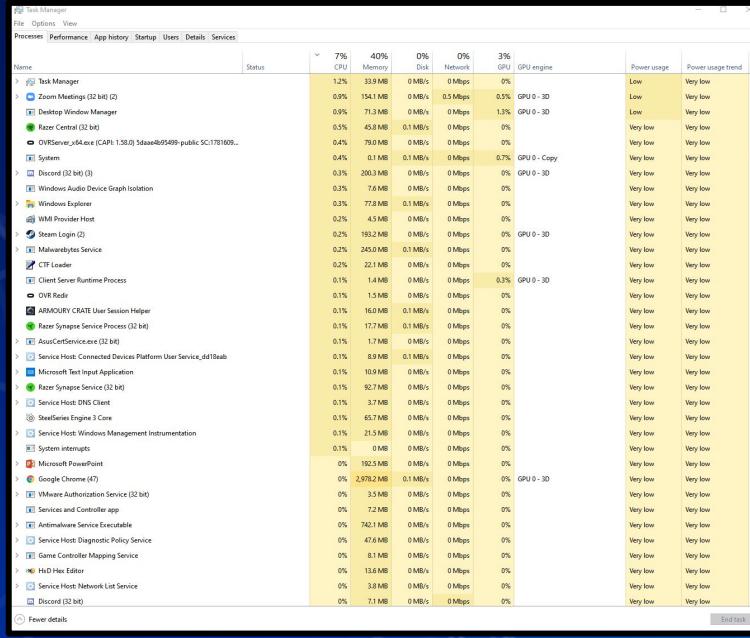

The screenshot shows the Windows Registry Editor interface. On the left, the navigation pane displays the registry tree under 'Computer'. A context menu is open over the 'fDenyTSConnections' key in the 'Control' subkey of 'CurrentControlSet'. The 'Edit DWORD (32-bit) Value' dialog is visible, showing the value name 'fDenyTSConnections' and the value data '1' in hexadecimal format. The 'OK' button is highlighted. On the right, the main pane lists the registry keys and their values for the 'Control' subkey:

Name	Type	Data
(Default)	REG_SZ	(value not set)
AllowRemoteRPC	REG_DWORD	0x00000000 (0)
DelayConMgrTi...	REG_DWORD	0x00000000 (0)

SnapshotMonitors	REG_SZ	1
StartRCM	REG_DWORD	0x00000000 (0)
TSUserEnabled	REG_DWORD	0x00000000 (0)

Task Manager

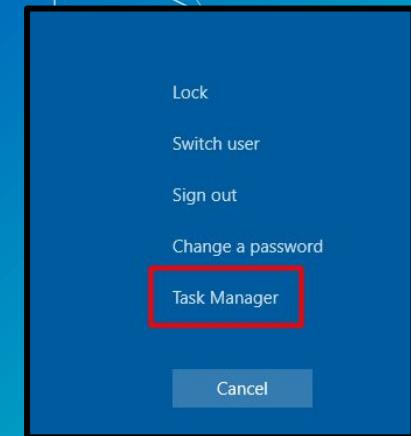

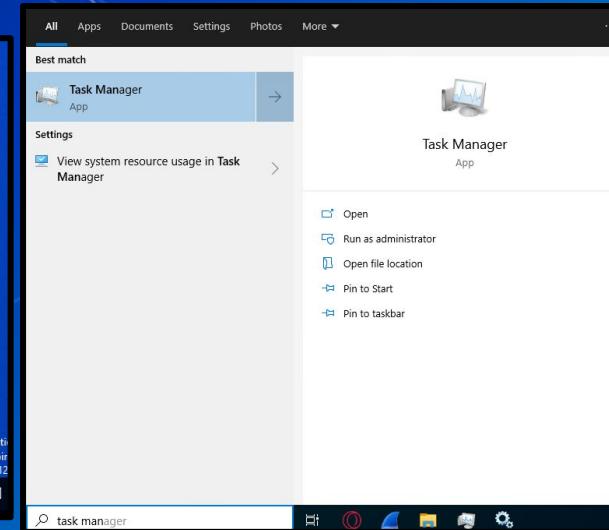

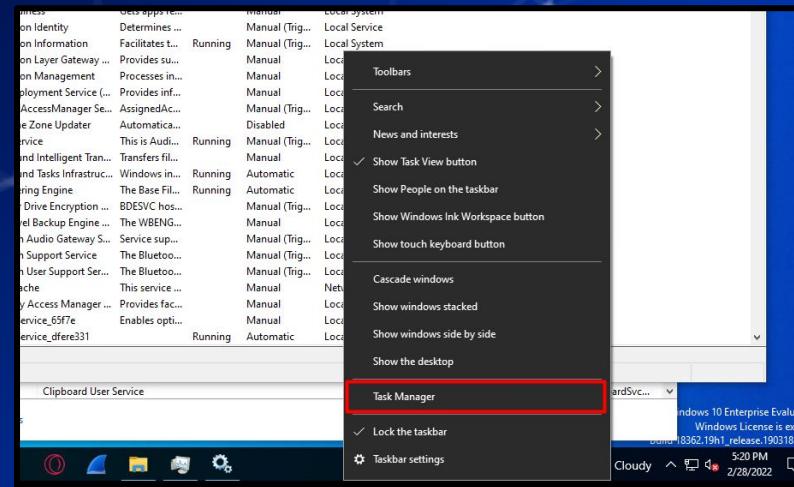

Task Manager

- Provides high-level view of what is running

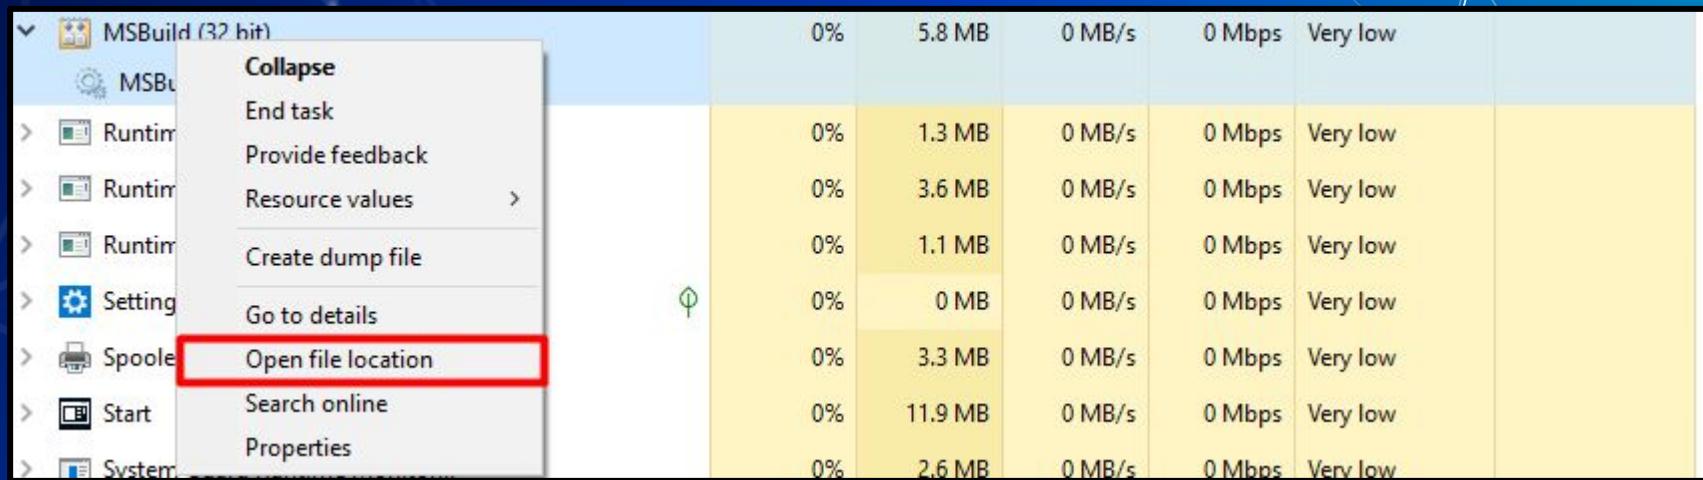

Task Manager cont.

- How to open it?

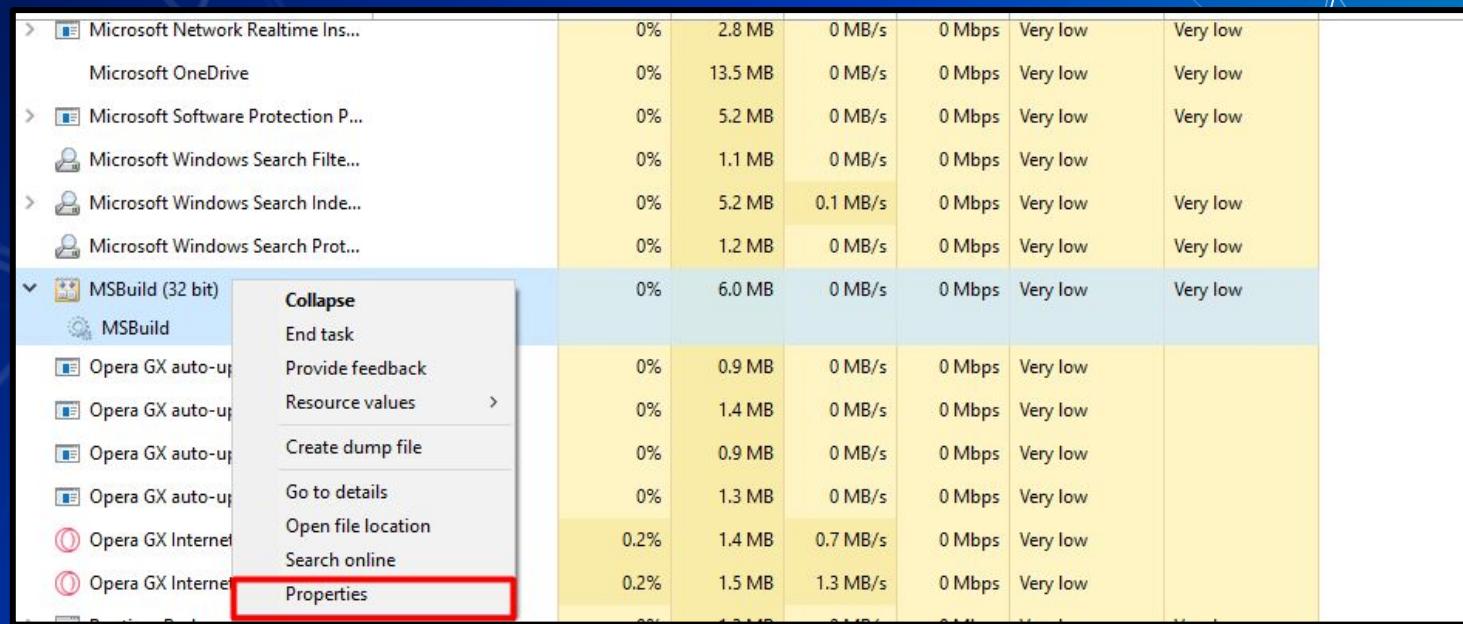

Task Manager cont.

- Can be used to find the location a running executable.

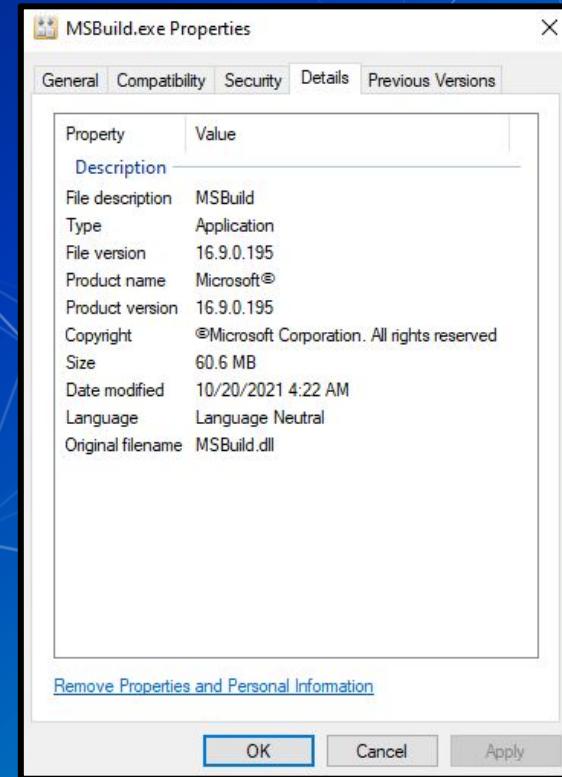

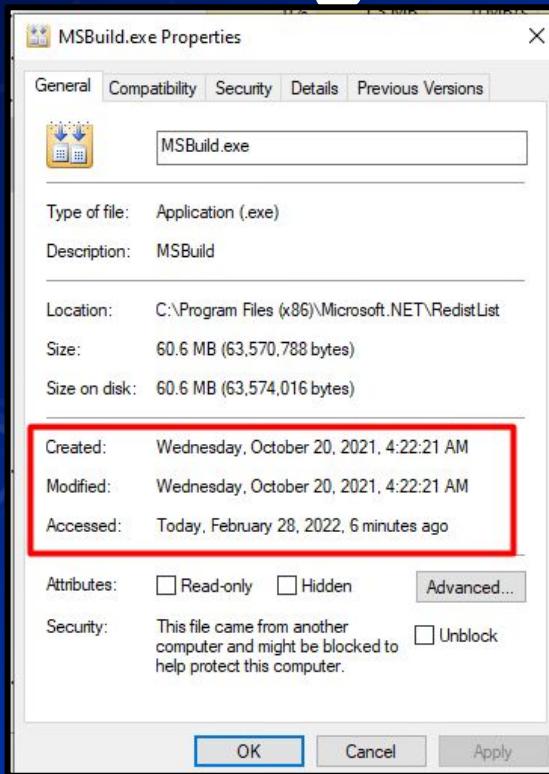

Task Manager cont.

- Show the properties of an executable

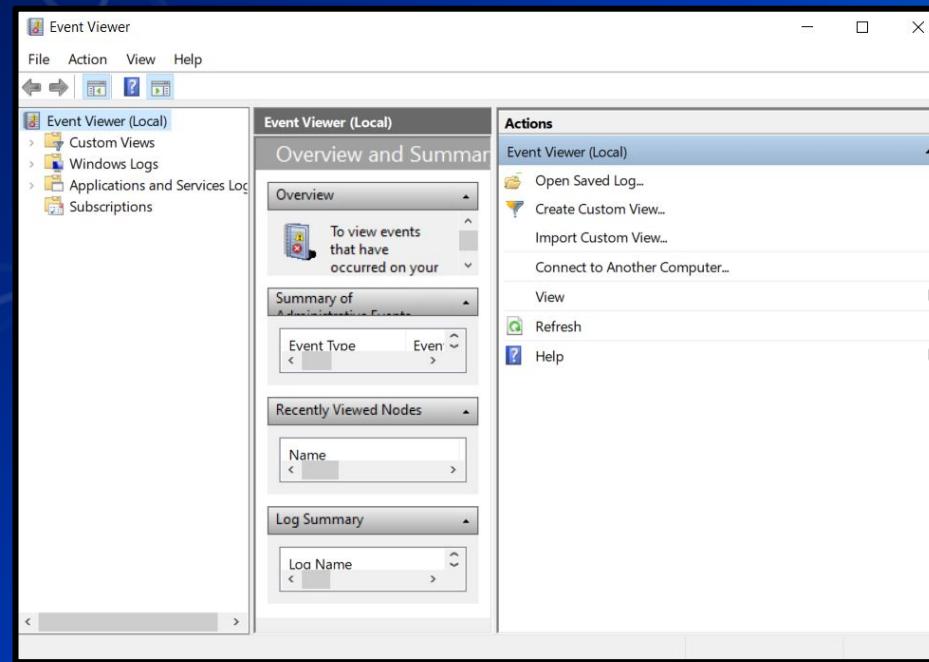

Task Manager cont.

Event Viewer

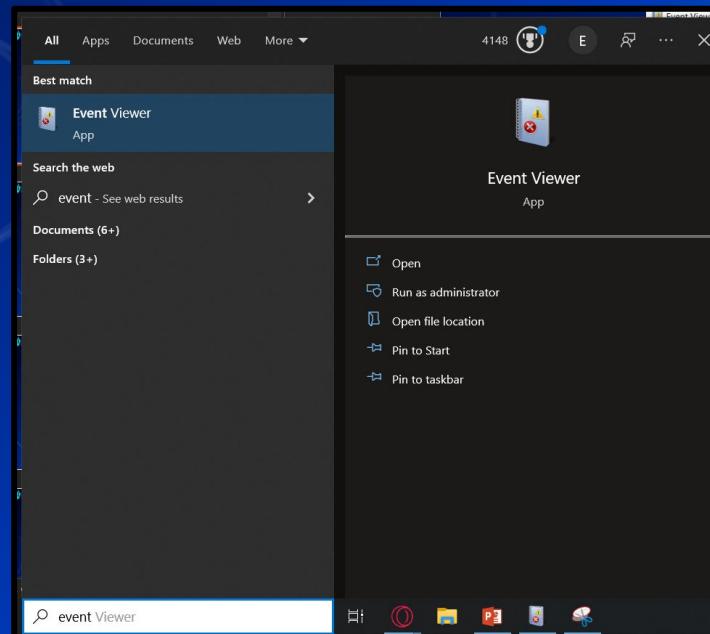

Event Viewer

- Log viewer for Windows

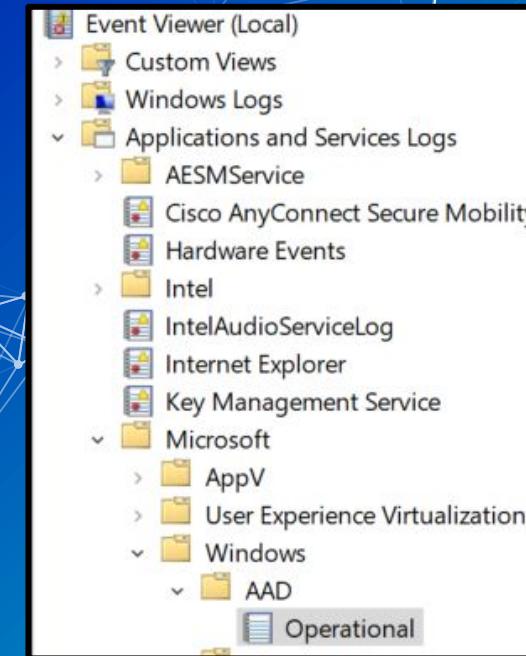

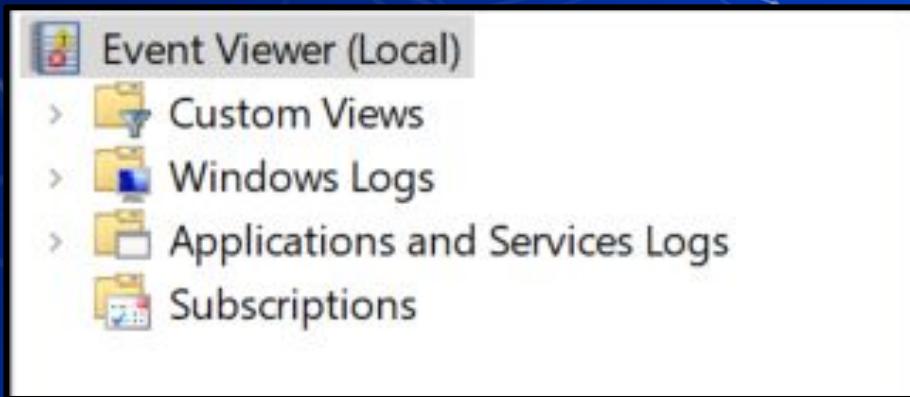

Event Viewer

- Can be opened by searching for "event" and clicking open

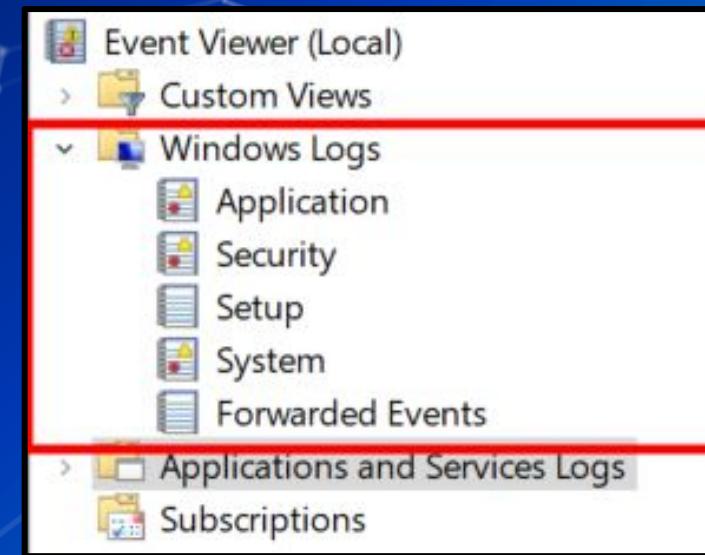

Event Viewer cont.

- Logs are stored in a hierarchical structure

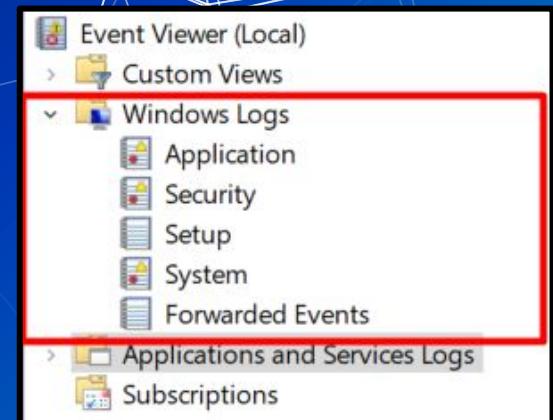

Event Viewer cont.

- Windows activities are stored within the “Windows Logs” folder

Event Viewer cont.

- Windows Logs are divided into 5 categories
 - Application
 - Logs related to some applications installed on system
 - Security
 - Security related logs (authentication actions are found here)
 - Setup
 - Installation of software on system (e.g., update installs are logged)
 - System
 - Low-level system events

Event Viewer cont.

- Individual logs are listed in the middle pane

The screenshot shows the Windows Event Viewer interface. On the left, the navigation pane lists categories like Custom Views, Windows Logs (Application, Security, Setup, System, Forwarded Events), Applications and Services Logs, and Subscriptions. The 'Security' category under 'Windows Logs' is selected and highlighted with a red box and a red arrow pointing to it from the top-left. The main pane displays a table of events with columns: Keywords, Date and Time, Source, Event ID, and Task Category. All listed events are for 'Audit Success' (Keywords) on '3/1/2022 5:48:27 PM' from 'Microsoft Wi...' with 'Event ID 5379' and 'Task Category User Account Management'. Below the table, a message states 'Event 5379, Microsoft Windows security auditing.' followed by tabs for 'General' and 'Details'. The 'Details' tab shows the subject of the audit: 'Credential Manager credentials were read.' and provides details about the user: Security ID: LAPTOP-2LN9C412\anthony, Account Name: anthony, Account Domain: LAPTOP-2LN9C412, Logon ID: 0x60A71B8, and Read Operation: Enumerate Credentials. A note below says 'This event occurs when a user performs a read operation on stored credentials in Credential Manager.' At the bottom, there's a summary of log properties: Log Name: Security, Source: Microsoft Windows security, Event ID: 5379, Level: Information, User: N/A, OpCode: Info, Logged: 3/1/2022 5:48:27 PM, Task Category: User Account Management, Keywords: Audit Success, Computer: LAPTOP-2LN9C412, and a link to 'More Information: [Event Log Online Help](#)'.

Event Viewer cont.

- Individual logs vary in complexity
- Windows generates many logs
 - Many of these logs are not helpful

Discussions on Event ID 4624

- Where does descriptive text come from at the end of 4624?
- 4624 Type 3 Filtering Help

This is a highly valuable event since it documents each and every successful attempt to logon to the local computer regardless of logon type, location of the user or type of account. You can tie this event to logoff events 4634 and 4647 using Logon ID.

Win2012 adds the Impersonation Level field as shown in the example.

Win2016/10 add further fields explained below.

Homework Hint

- The initial vector of breach is in the Windows logs.
- The attack was a brute force attack against one of the Windows remote access tools.

Questions?

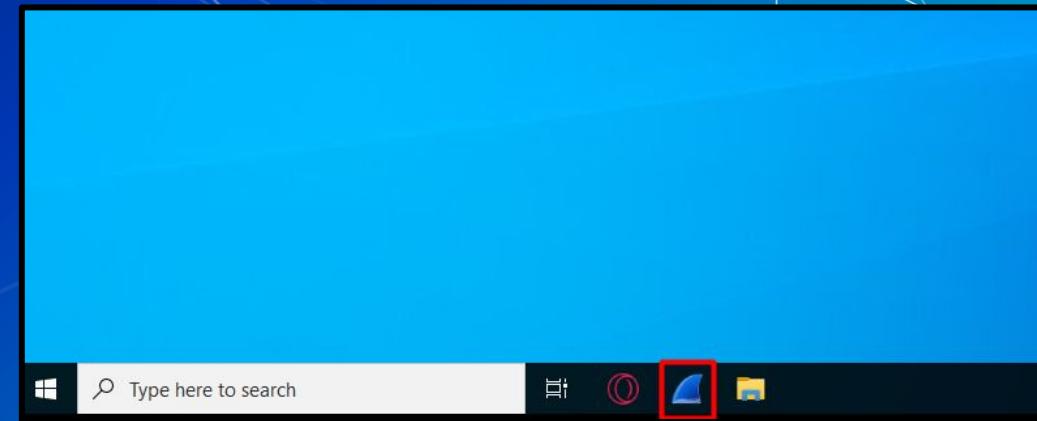

Network Forensics

Network Forensics Hands-on

- Sign onto the machine in your team folder called "WINIRForClass"
 - Username: sysadmin
 - Password: Change.me!

Wireshark

- Packet analyzer
- Free
- Open-source
- Available on:
 - Windows
 - Linux
 - MacOS

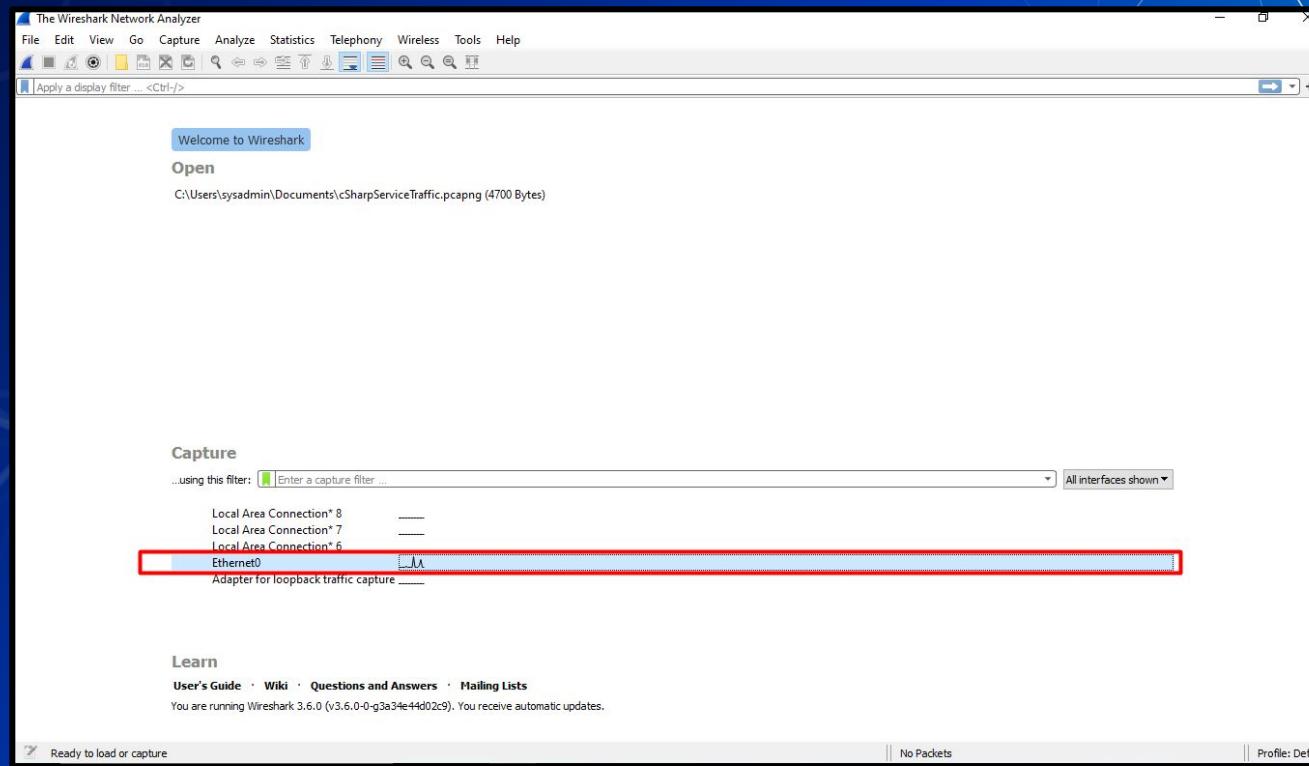

In Class Activity

WireShark

Hands on 0 - Wireshark

- Locate suspicious network traffic
- Create a Windows firewall rule to block the traffic

Network Forensics Hands-on

Break Slide

PowerShell For IR

PowerShell

- Automation and configuration tool
- <https://docs.microsoft.com/en-us/powershell/>

```
Windows PowerShell
Copyright (C) Microsoft Corporation. All rights reserved.

Try the new cross-platform PowerShell https://aka.ms/pscore6

PS C:\Users\anthony>
```

Cmdlets

- Cmdlets are commands in PowerShell
- Cmdlets use verb-noun format
 - `Get-computerinfo`
 - `Get-filehash`
 - `Write-output`
 - Etc...

Get-Filehash

- “Computes the hash value for a file by using a specified hash algorithm.”

In Class Activity

PowerShell

Hands on 1 – Piping Output

- Compute the SHA384 hash of test.exe on your desktop using `get-filehash`
- Get-Filehash documentation
 - <https://tinyurl.com/yw9zv3cw>

Hands on 1 – Piping Output

- Any problems with the result?

Hands on 1 – Piping Output

- We can send output from one command to another
- Output of command 1 is sent to command 2
 - Ex: <command_1> | <command_2>
- Using the documentation below what command can we pipe to for the fix the output?
 - <https://tinyurl.com/yw9zv3cw>

Searching PowerShell Output

- `Get-Service` "Gets the services on the computer."

```
PS C:\Users\anthony> get-service

Hands on 2 – Searching Output

- List ONLY services that have a StartType as automatic
 - Ensure the output DOESN'T get trimmed
- Use the below documentation
 - <https://tinyurl.com/z5psdn87>

Hands on 2 – Searching Output

- Run the following command
 - `Get-WmiObject win32_Service | select *`
- What is the difference between this and `Get-Service`?

Break Slide

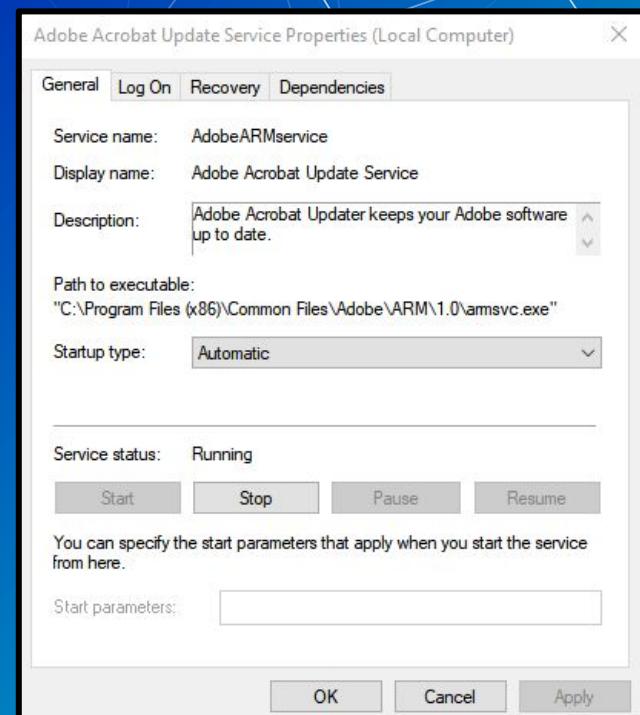

WMI & Services

Windows Management Instrumentation (WMI)

- Can be used to manage Windows devices
- Allows remote communications through:
 - Distributed Component Object Model (DCOM)
 - Windows Remote Management (WINRM)
- Great tool for IT personnel and malicious actors

Services

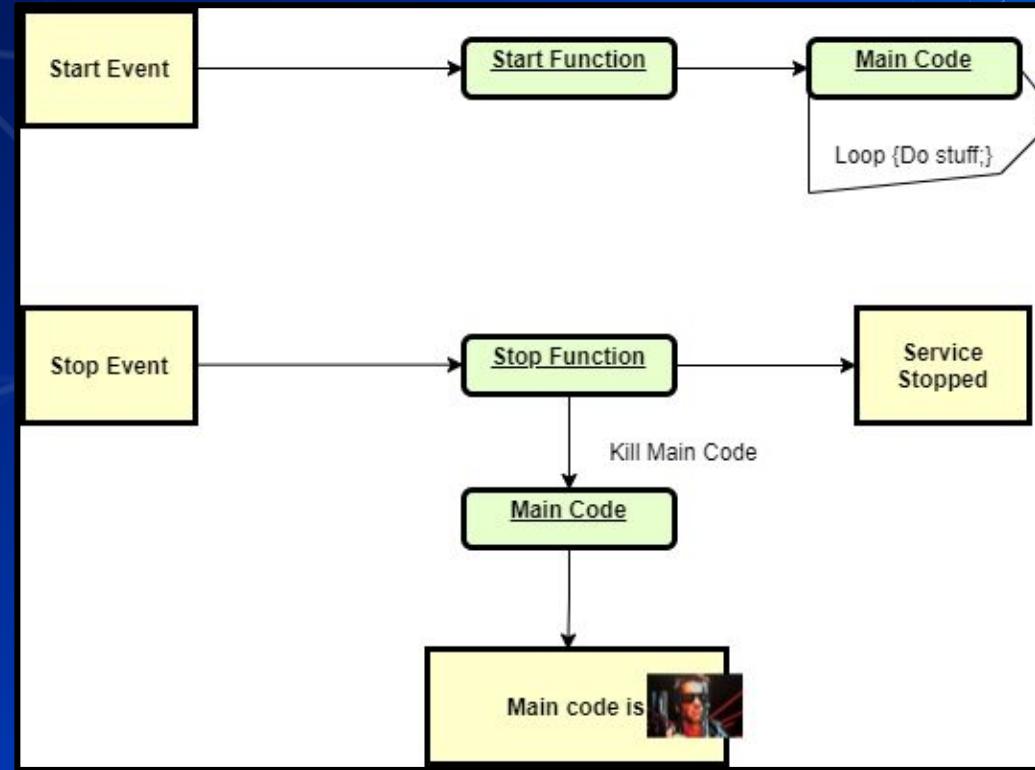

- Behind the scenes to keep things working
- 4 startup types
 - Automatic (Delayed Start)
 - Automatic
 - Manual
 - Disabled

Services

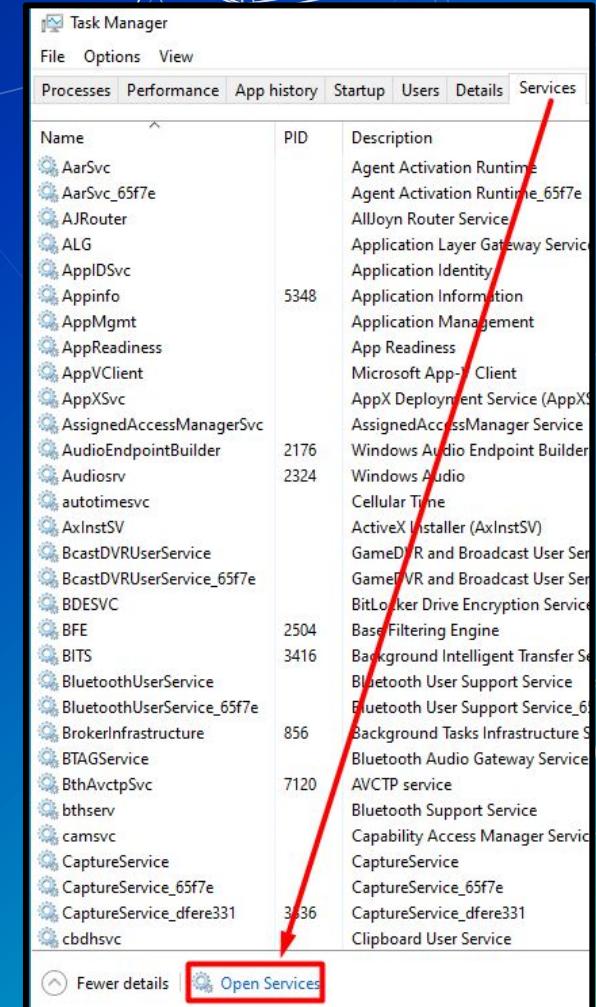

- Can run as nt authority \system
 - nt authority \system != root
 - Is more powerful than an “administrator”
- Active even when no user is signed in
- May be hosted by the service host (svchost.exe)
- May be executables that are designated to be services
- Follow a defined service model

Service Model

How to list services?

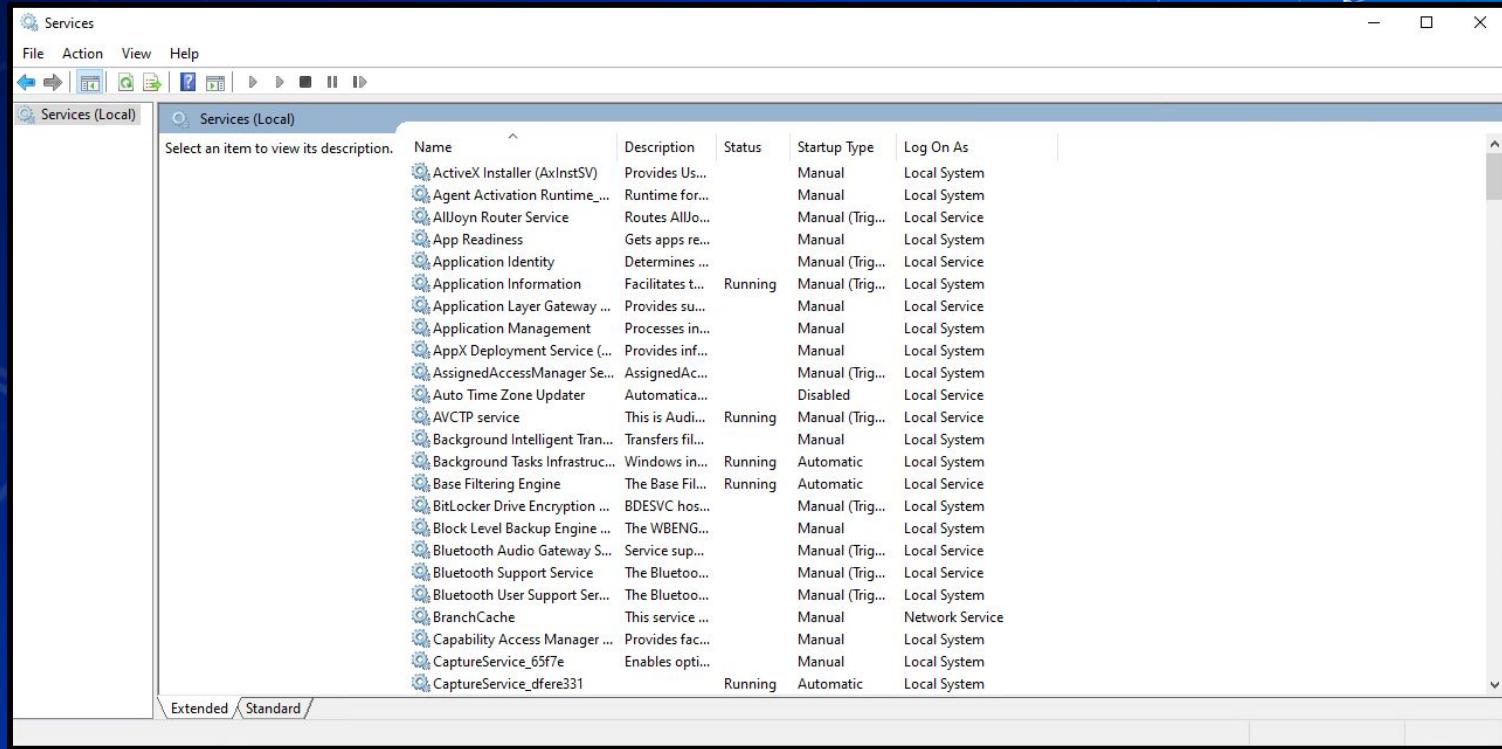

- Open Task Manager and navigate to services tab

Task Manager		
File Options View		
Processes	Performance	App history
Name	PID	Description
AarSvc		Agent Activation Runtime
AarSvc_65f7e		Agent Activation Runtime_65f7e

Services List

Services (Local)					
Cryptographic Services					
Stop the service Restart the service					
Description: Provides three management services: Catalog Database Service, which confirms the signatures of Windows files and allows new programs to be installed; Protected Root Service, which adds and removes Trusted Root Certification Authority certificates from this computer; and Automatic Root Certificate Update Service, which retrieves root certificates from Windows Update and enable scenarios such as SSL. If this service is stopped, these management services will not function properly. If this service is disabled, any services that explicitly depend on it will fail to start.

Services List

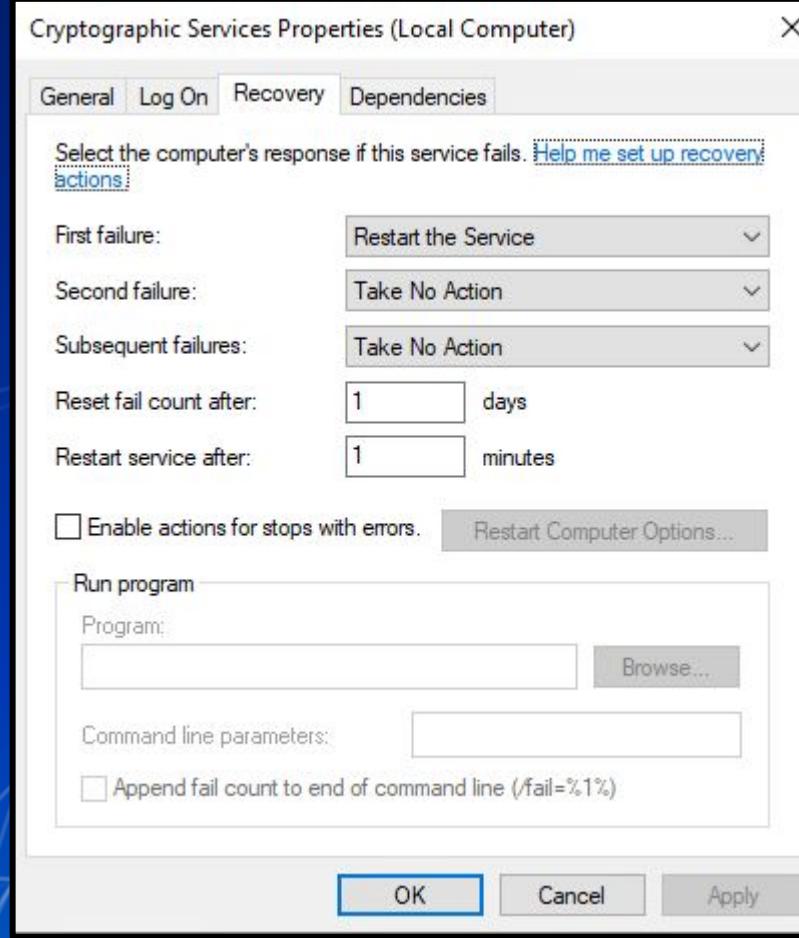

Services List

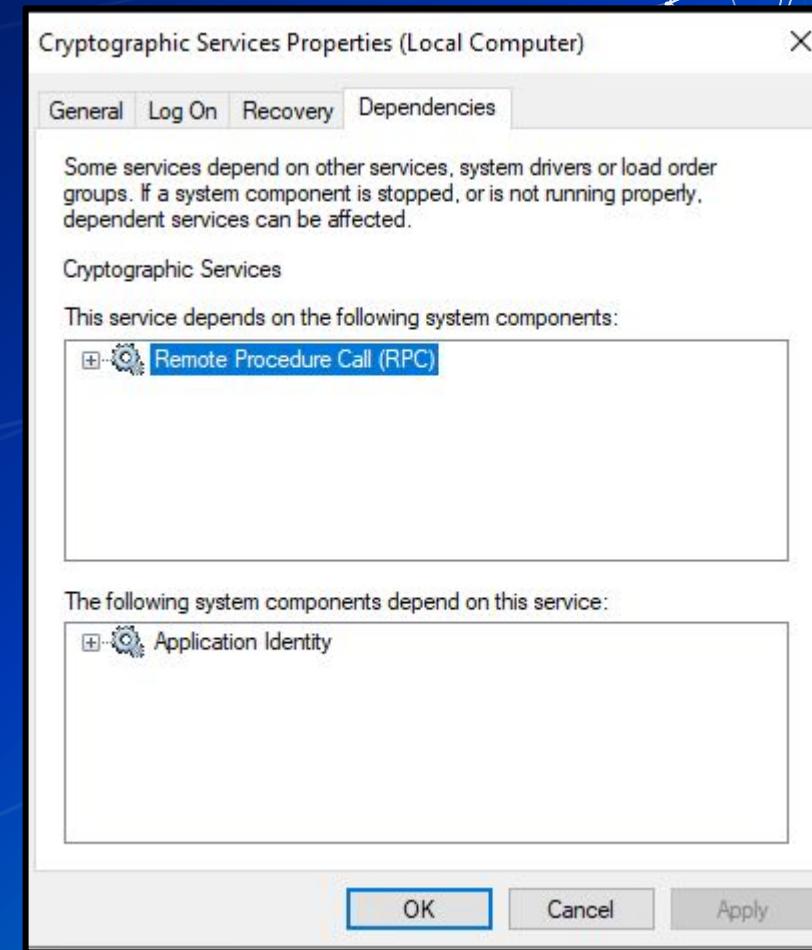

Services List

Services List

Services List

In Class Activity

Find a Malicious Service

Hands on 3- Find a Malicious Service

- Use the previous command we learned
 - `Get-WmiObject win32_Service`
 - Add `| Format-Table` at the end
- Attackers often want constant access
 - What StartType would an attacker use?
- If you see something say something
 - Google anything suspicious
 - Legitimate applications break often and people post online about them
- Remove the malicious service
 - Hint[0]: `sc delete <service name>`
 - Hint[1]: Can services be processes?

Hands on 3- Delete a Malicious Service

1. <REDACTED>
2. Using Command Prompt, enter: <REDACTED>
3. Reboot

RESTART YOUR WINDOWS VM

Persistence

Persistence

- Malware aims to survive
 - Restart
 - Settings Changes
 - Users signing on/off
 - Network connectivity loss
 - Countermeasures
 - Systems updates
 - Anything else....

Persistence Methods

- Windows persistence methods and their complexity
 - Drivers (**HIGH**)
 - Registry Keys (**LOW**)
 - Startup Objects (**LOW**)
 - Scheduled Tasks (**LOW-MEDIUM**)
 - Image File Execution Options (**MEDIUM**)
 - Hint: Might be relevant for your homework this week
 - WMI Subscriptions (**MEDIUM**)
 - PowerShell Profiles (**LOW-MEDIUM**)
 - Malicious Group Policies (**MEDIUM**)

Registry Keys

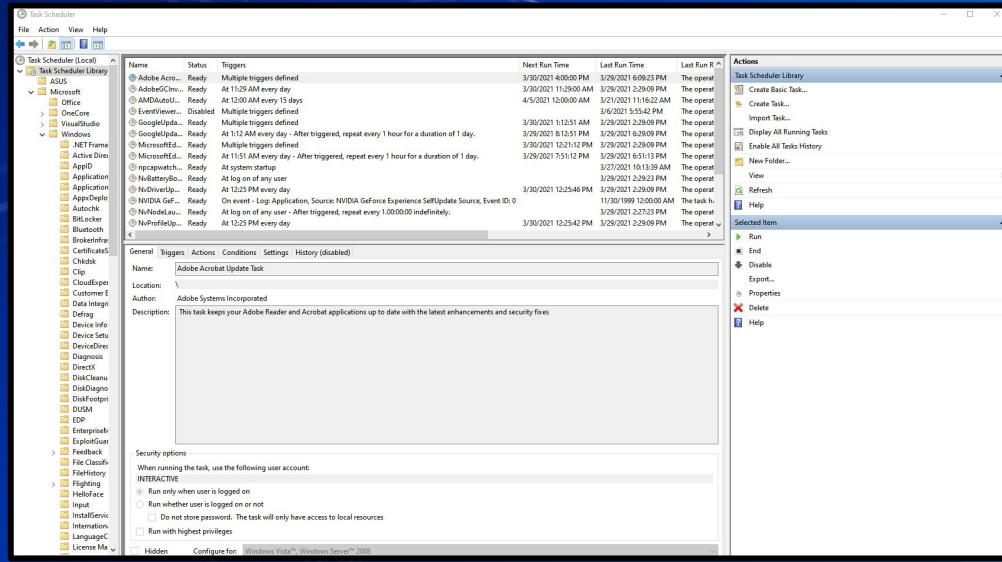

- Registry Editor is a GUI way of viewing registry
 - **Get-ItemProperty** can be used as well
 - <https://tinyurl.com/9hbeh72f>
- Two directories for running at sign on
 - HKEY_CURRENT_USER\SOFTWARE\Microsoft\Windows\CurrentVersion\Run
 - HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Run

Computer\HKEY_CURRENT_USER\Software\Microsoft\Windows\CurrentVersion\Run			
	Name	Type	Data
>	(Default)	REG_SZ	(value not set)
>	GaijinNet Upda...	REG_SZ	"C:\Users\anthony\AppData\Local\Gaijin\Program ...
>	Synapse3	REG_SZ	"C:\Program Files (x86)\Razer\Synapse3\WPFUI\Fra...

Computer\HKEY_LOCAL_MACHINE\Software\Microsoft\Windows\CurrentVersion\Run			
	Name	Type	Data
>	(Default)	REG_SZ	(value not set)
>	MMDevices	REG_SZ	
>	Mrt	REG_SZ	
>	NcdAutoSetup_SZ	REG_SZ	
>	NetCache	REG_EXPAND_SZ	%windir%\system32\SecurityHealthSystray.exe
>	NetworkServiceTriggers	REG_SZ	"C:\Program Files\SteelSeries\GG\SteelSeriesGG.exe"

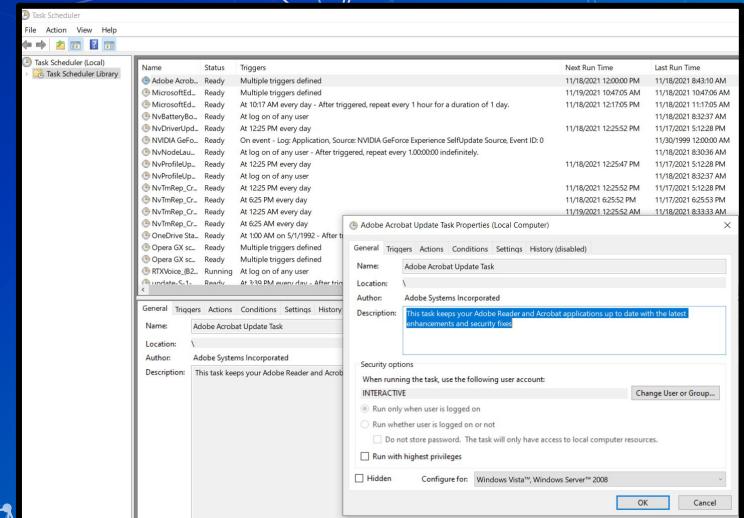

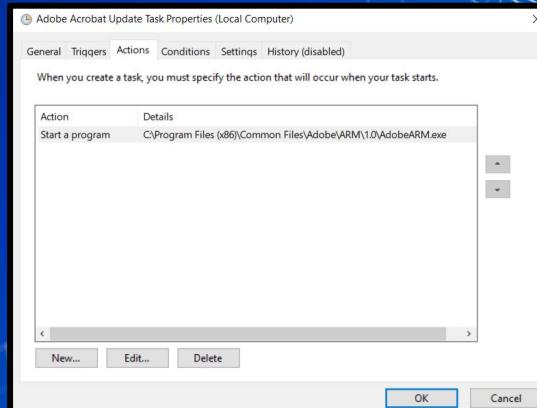

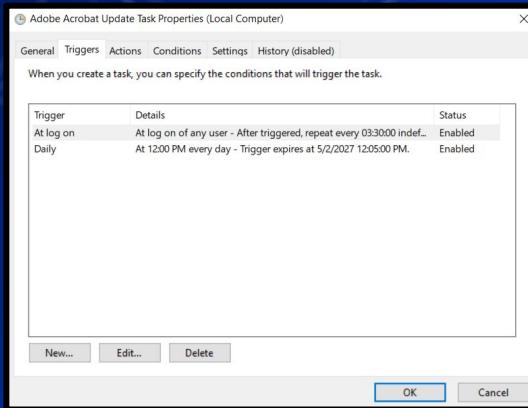

Scheduled Tasks

- Perform actions given specific triggers
- Stored in C:\Windows\System32\Tasks as xml files

Scheduled Tasks cont.

- Can be managed through Task Scheduler
- Consists of Triggers & Actions
 - Triggers: When Do?
 - Actions: What Do?

PowerShell Profile

- Runs each time PowerShell.exe is opened
- A PowerShell script

Description	Path
All Users, All Hosts	\$PSHOME\Profile.ps1
All Users, Current Host	\$PSHOME\Microsoft.PowerShell_profile.ps1
Current User, All Hosts	\$Home\[My]Documents\PowerShell\Profile.ps1
Current user, Current Host	\$Home\[My]Documents\PowerShell\Microsoft.PowerShell_profile.ps1

Malicious Group Policies

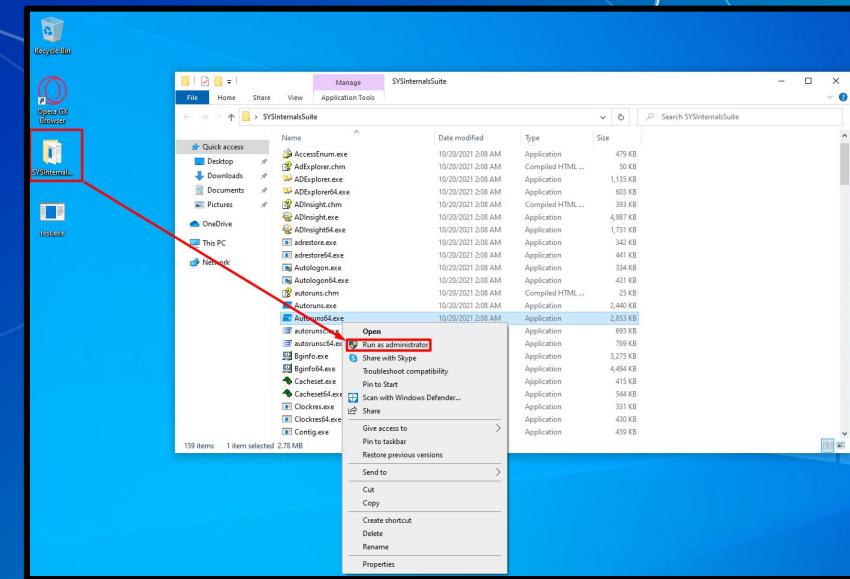

- Group policies can soften the security posture of a device
 - Disable anti-virus
 - Turn off or flood logs
 - Disable firewalls
 - And more!
- Group Policies can be used to establish registry based persistence
- Malicious group policies are very dangerous

Hands on 4 – Combating Persistence

- Check services again
 - What do you notice?

Hands on 4 – Combating Persistence

- SysInternals is an open-source suite of tools for Windows
 - AutoRuns a tool to detect persistence
 - Run autoruns as Admin from the Sysinternals folder on your desktop

Hands on 4 – Combating Persistence

- Categories of persistence

Screenshot of Autoruns (Windows) showing persistence entries:

Hands on 4 – Combating Persistence

- Find and remove the item that is allowing the <REDACTED> to persist
 - Hint: It is not a GroupPolicy, PowerShell Profile, Driver, Image File Execution Option or Startup Object
- After you have removed the persistence
 - Stop the service using task manager
 - Delete the <REDACTED> using <REDACTED>
- Restart the computer
 - Is the service gone?
